

THE WORLD WIDE WEB

Tim berners Lee

In the year 1982 The World Wide Web was invented by a man named Tim Berners-Lee. He started his experience with programming by working for a printer typesetting company. In the year 1980 he worked as an independent contractor for the computer company CERN, later he joined the company fulltime. He later Invented the Internet by doing the first successful connection of a Hypertext Transfer protocol. He was later listed by TIMES as one of the most influential people of the twentieth century.

WHAT IS THE WORLD WIDE WEB?

The world wide web is a computer network created by a man named Tim Berners-Lee in the year 1989. Although it is similar to the internet, it is not the internet. The internet is many connected computers, while the World Wide Web is webpages you can view online.

HOW DOES THE WORLD WIDE WEB WORK?

The World Wide Web works by utilizing HTTP (Hypertext Transfer Protocol) requests. These requests pull information from other servers. If there is information on the link, The request will find it and bring it back to you.
