This file created by Titus Taylor

Project name: Java Card Game Project V2.0

NDeckClass.java:
Lines 1-4//
// I see nothing wrong with this file at all. But if i'm going to be super nitpicky you could make it more obvious how it relates to the other files.

NCardClass.java
// Lines 17-71, you could use an algorithm to assign each card a value and a suit, instead of having each unique card have a line of code.
// No jack cards are in the deck.
// Line 56-61, This part could be removed

NGameClass.java
// You could have had the program read out the results slower. As you have to scroll back up to see the results if it is just 1 player.
